

## **Tourist Tales Test Plan:**

**Goal:** To test Tourist Tales

**Method:**

1. Organise test PCs
2. Organise testing team
3. Do testing
4. Send feedback to programmers

**What I need:**

- 3 PCs
- Copy of program
- People to complete testing

## **Tourist Tales Test Cases:**

Testers are required to test the sample data in the file:

TouristTalesTestData.xls

## Log of Emails to Manager and Project Team:

### Email re Requirements for Testing

To: Greg  
From: Jeff Steel

-----  
Hi Greg

This email is in regards to finalising the project Lauras Landscaping.  
As part of this project the first steps were in contacting the client, this was then followed up by a QA meeting in which the client and a few representatives from the company gather the project requirements and reported their findings to the management team as well as the dev team.

After this the dev team validated the requirements into their respective areas and filled out the necessary paper work during this time.

Followed up by prototypes as well as a proof of concept. This was done in full by the team.

The QA team then joined the project to apply analysis and design to the project.

At this time a management / analyst team filled out a risk matrix along with related documentation.

Once all necessary project initialisation was completed the engineering team started dev work based on the stated documentation/s.

After certain checkpoints were reached, the testing team went to work.

We provided both a status and feedback report to the team.

Regards,  
Jeff Steel
